

ABSTRACT

A solenoid valve includes a first mounting face and a second mounting face for mounting of a terminal box. The first mounting face is formed with terminal
5 holes in which coil terminals are housed and a screw hole for fixing. The second mounting face is provided with an elastic clip having hooks. The terminal box is in a substantially L shape. A first portion of the terminal box is provided with connecting terminals to be connected to the coil terminals, a connector to be brought into continuity with the connecting terminals, and a printed board mounted with an
10 indicating lamp and electric components. A second portion of the terminal box is provided with locking holes into which the hooks of the elastic clip are locked.
